WORK EXPERIENCE

The Dev Difference Chicago, IL (Remote)
Co-founder, Product Lead April 2023 to Present

Summary: AI hiring platform that pre-screens applicants with an agentic AI interviewer and flags cheating; grew from 50 to 2,000+ candidates across 60+ universities in the US, Mexico and Nigeria, and raised $260K.

- **Product strategy and user interviews:** From 200+ employer interviews and survey respondents, set the assessment strategy: shift from B2C to B2B2C and assess role fit across tech and sales rather than older coding-interview styles; built a blueprint of eight interview types for the AI to generate within (behavioral, situational, debugging, product estimation, product strategy, system design, sales scenarios, AI workflow and knowledge).
- **Roadmap and delivery:** Own roadmap planning and prioritization across client-dependent builds, including cheating and deepfake detection (flags 30% of applicants per role and raises the accuracy of the recommended shortlist) and Spanish-language interviews, each delivered on its committed timeline and won a major contract.
- **Activation and engagement:** Built automated candidate messaging on PBX.IM that sends job invitations and application status updates over iMessage and WhatsApp, raising assessment submissions from 22% to 40%.
- **Growth and analytics:** Redesigned the marketing site around customer storytelling, raising click-through rate by 28%; prototype in React, hand off to engineering, measure in PostHog; set up the Stripe integration for payments.
- **Retention and churn:** Led a churn study combining customer data with 25 prospect interviews; traced lapses to complex output and workflow gaps, then shipped a top-3 shortlist view and email next steps, increasing customer retention.
- **Data and SQL:** Built the company's first product dashboards in Azure, writing the SQL for usage, funnel and retention metrics.

ADP Atlanta, GA
Software Engineer Intern June 2024 to August 2024

- Automated mobile QA across 12 iOS and Android devices (Appium, Flutter), cutting validation from 7 minutes to 12 seconds per test and enabling 24/7 test runs.
- Scripted local environment setup in Bash, reducing engineer onboarding time 70%.

Google New York, NY
Technical Recruiter May 2022 to April 2023

- Recruited privacy engineers for Chrome OS and embedded engineers for Android Auto.
- Led weekly pipeline data analysis and beat the team's diversity sourcing goal by 12 points.

Codecademy New York, NY
Associate Recruiter September 2020 to May 2022

- Product researcher on an internal mobile IDE project requested by 22% of app users; internal hackathon winner.
- Hired 108 engineers, #1 on the team by volume; co-led a 50-person ERG for women and non-binary employees.

Spencer Stuart New York, NY
Research Analyst June 2019 to September 2020

- Built 60+ pitch documents supporting $2.9M in sales to clients including Meta, Starbucks, Harvard and the Smithsonian.
- Ran competitive and financial analysis of clients from 990s, 10-Ks and financial summaries, and produced the practice's monthly business performance reports.

SPEAKING AND COMMUNITY

- Speaker at Google Deep Tech Demo Day, Jobs for the Future Horizons Summit, Grace Hopper, SXSW and Harvard.
- Chicago Public Schools Technology Advisory Committee; mentor, RISE Young Women in Business; founded a scholarship program for students in my hometown in rural Northwest Indiana.
